

REQUEST FOR PROPOSAL
I-405, Brickyard to SR 527 Improvement Project

Traffic Signals

2.17 Traffic Signals

2.17.1 General

The Design-Builder shall perform all Work necessary to meet the Contract requirements for the traffic signal systems. The traffic signal systems for the Project shall include, at a minimum, the following:

- Signal standards and mast arms
- Luminares on signal standards
- Foundations
- Vehicle heads
- Accessible pedestrian signals
- Accessible pedestrian pushbutton assemblies
- Vehicle detection
- Emergency vehicle preemption detectors
- Terminal cabinets
- Junction boxes
- Conduits and wirings
- Temporary vehicle detection system
- Temporary traffic signal system
- Uninterruptable Power Supply (UPS) system
- Traffic signal control cabinet and associated equipment
- Signal interconnect
- Backup Power Source (BPS) system (for City of Bothell signals)

The Design-Builder shall install electrical services or utilize existing services to provide power for all signal systems, in accordance with the Contract.

The Design-Builder shall maintain existing traffic signal systems during construction in accordance with Section 2.29, *Maintenance During Construction*.

2.17.1.1 Forward Compatibility

This Section intentionally omitted.

2.17.2 Mandatory Standards

The following is a list of Mandatory Standards that shall be followed for all design and construction related to this Section as referenced in Section 2.2, *Mandatory Standards*.

- 1 1. Special Provisions (Appendix B)
- 2 2. WSDOT Northwest Region *Electrical Special Provisions* (Appendix B)
- 3 3. WSDOT *Construction Requirements for Light and Signal Standard*
- 4 *Foundations Using Drilled Shaft Construction and Permanent Casing*
- 5 (Appendix T)
- 6 4. Standard Specifications M 41-10 (Appendix B)
- 7 5. WSDOT Northwest Region *Current Practices in Electrical Design*
- 8 (Appendix T)
- 9 6. WSDOT Northwest Region *Illumination and Signal Details* (Appendix T)
- 10 7. WSDOT *Design Manual* M 22-01 (Appendix D)
- 11 8. Standard Plans M 21-01 (Appendix D).
- 12 9. WSDOT *Traffic Manual* M 51-02 (Appendix D)
- 13 10. *Washington State Modifications to the Manual on Uniform Traffic Control*
- 14 *Devices* (WAC 468-95) (Appendix D)
- 15 11. WSDOT *Materials Manual* M 46-01 (Appendix D)
- 16 12. WSDOT *Construction Manual* M 41-01 (Appendix D)
- 17 13. *NFPA 70: National Electrical Code (NEC)*, 2008
- 18 14. *IESNA American National Standard Practice for Roadway Lighting*
- 19 *(ANSI/IES RP-8-00)*
- 20 15. WSDOT *Plans Preparation Manual* M 22-31 (Appendix D)
- 21 16. WSDOT *Maintenance Manual* M 51-01 (Appendix D)
- 22 17. *FHWA Manual on Uniform Traffic Control Devices for Streets and*
- 23 *Highways*, 2009 Edition with Revisions 1 and 2 dated May 2012
- 24 (Appendix D)
- 25 18. WSDOT *Signal Turn-On Requirements* (Appendix T)
- 26 19. *AASHTO A Policy on Geometric Design of Highways and Streets*
- 27 20. WSDOT *Bridge Design Manual (LRFD)* M23-50 (Appendix D)
- 28 21. *AASHTO Roadside Design Guide*
- 29 22. *Transportation Research Board Highway Capacity Manual*
- 30 23. *Snohomish County Traffic Signal Special Provisions* (Appendix B)

31 **2.17.3 Design Requirements**

32 The Design-BUILDER shall perform all Work necessary to design and construct a
33 permanent traffic or pedestrian signal system as follows:

- 34 • Install new “T” traffic signal at SR 522 and northbound I-405 to
- 35 westbound SR 522 off-ramp

- 1 ○ Traffic signal with mast-arm signal standards, controller, detection
- 2 loops, and electrical service and UPS
- 3 • Install new full traffic signal at SR 522 and northbound/southbound
- 4 I-405 Direct Access ramps.
- 5 ○ Traffic signal with mast-arm signal standards, controller, detection
- 6 loops, and electrical service and UPS
- 7 • Install new full traffic signal at SR 522 and southbound I-405 off-ramp
- 8 and transit center
- 9 ○ Traffic signal with mast-arm signal standards, controller, detection
- 10 loops, and electrical service and UPS
- 11 • Install new “T” traffic signal at 17th Avenue NE and
- 12 northbound/southbound I-405 to 17th Avenue SE
- 13 ○ Traffic signal, controller, detection loops, and electrical service
- 14 • Install modifications to the existing traffic signal at NE 195th Street and
- 15 Beardslee Boulevard to southbound I-405 on-ramp.
- 16 ○ One type 1 traffic signal standard and detection loops
- 17 • Install new full traffic signal at 220th Street and 17th Avenue SE
- 18 meeting Snohomish County *Traffic Signal Special Provisions*
- 19 ○ Traffic signal with mast-arm signal standards, controller, video
- 20 detection, and electrical service
- 21 ○ 2070 controller with Maxview software and licensing from
- 22 INTELIGHT
- 23 ○ Two sets of advance detection loops in all lanes in the eastbound
- 24 approach
- 25 ○ One set of advance detection loops in all lanes for the northbound
- 26 and westbound approaches
- 27 ○ New cabinet and BPS, with batteries allowing for a minimum of
- 28 2 hours run time
- 29 • Remove and replace existing traffic signal at 220th Street and SR 527
- 30 meeting Snohomish County *Traffic Signal Special Provisions*
- 31 ○ Remove existing traffic signal and install a new traffic signal with
- 32 mast-arm signal standards, controller, video detection, and electrical
- 33 service
- 34 ○ 2070 controller with Maxview software and licensing from
- 35 INTELIGHT
- 36 ○ Two sets of advance detection loops in all lanes except for the
- 37 eastbound approach
- 38 ○ BPS cabinet and BPS, with batteries allowing for a minimum of
- 39 2 hours run time
- 40 ○ The new City of Bothell traffic signals shall be interconnected with
- 41 underground conduit and fiber optic communications system

- Additional detection to support Adaptive Signal Control to be installed per Snohomish County Traffic Signal Special Provisions.

The new traffic signal systems shall meet the following performance requirements:

- Optimize traffic flow and minimize delay using signal phasing that matches the Access Revision Report (ARR) and the I-405, Brickyard to SR 527 Improvement Project - Intersections Operations Memorandum (Appendix T).
- Develop signal timing plans to optimize traffic flow and minimize delays.
- Interconnect with signalized intersections on the main line and arterial roads within a mile of the new traffic signal system
- Accommodate pedestrians where applicable
- Function safely

The Design-Builder shall coordinate with WSDOT, City of Bothell and Snohomish County when designing signal improvements that will be maintained and operated by a WSDOT, City of Bothell, and Snohomish County.

If the Design-Builder determines that signal phasing other than assumed in the Synchro files is required, then additional analysis shall be performed and submitted to the WSDOT Engineer for Review and Comment.

All signals owned and operated by WSDOT shall be equipped with UPS and generator transfer switches in accordance with the WSDOT Northwest Region Electrical Special Provisions, Appendix B.

All signals owned by City of Bothell, and any items indicated as “Contracting Agency Supplied Items” in the Snohomish County *Traffic Signal Special Provisions* shall be supplied by the Design-Builder.

Install Transit Signal Priority (TSP) roadside equipment at the following signalized intersections:

1. I-405 ETL direct-access ramp and SR 522
2. I-405 southbound on/off-ramp and SR 522
3. I-405 northbound on/off-ramp and SR 522
4. I-405 southbound on/off-ramp and NE 195th Street
5. I-405 northbound on/off-ramp and NE 195th Street
6. I-405 ETL direct-access ramp and Canyon Park Park and Ride connector road.

Installation of the TSP equipment at these locations shall include:

- Opticom 3100 GPS Radio Unit (mast arm mounted)
- Opticom 1070 GPS installation cable (from GPS Radio Unit to phase selector in signal controller cabinet – maximum cable distance 250 feet)

- Opticom 763 Multimode Phase Selector card (in signal cabinet)
- Opticom Auxiliary Interface panel (in signal cabinet)

Rectangular Rapid Flashing Beacon System (RRFB):

- Infrastructure for a future RRFB system shall be installed crossing the northbound SR 527 to southbound I-405 on-ramp. The Design-Builder shall install two 2-inch conduits connected to a junction box at each end. The Design-Builder shall also install a 2-inch conduit connecting the RRFB infrastructure to the SR 527/Southbound I-405 ramp terminal traffic signal cabinet.

2.17.3.1 Operational Analysis Software

Refer to Section 2.21, *Traffic Operations*, for software requirements pertaining to traffic signal operations modelling.

2.17.3.2 Design Documentation

The Design-Builder shall provide all documents and information required for the Design Documentation Package.

2.17.3.3 Foundations

The Design-Builder shall conduct a soils investigation for each signal standard location. Foundations for signal standards shall require soil analysis and investigation to determine impacts to signal standard foundation design, including the lateral bearing pressure, friction angle, and water table. All underground Utilities within 5 feet of proposed signal foundations shall be located by potholing.

Where Standard Plan foundations cannot be used, foundations shall be designed in accordance with Section 2.6, *Geotechnical*.

Where foundation construction requires the use of drilled shafts and permanent casing, the foundation shall be constructed in accordance with the WSDOT *Construction Requirements for Light and Signal Standard Foundations Using Drilled Shaft Construction and Permanent Casing*.

Where signal poles are mounted on structures, the structure mounts shall be designed in accordance with Section 2.13, *Bridges and Structures*.

2.17.3.4 Junction Boxes, Pull Boxes, and Cable Vaults

One pull box and one small cable vault shall be installed adjacent to and within 5 feet of each double-wide signal controller cabinet (Type 332D or Type 342LX). The pull box shall route conduit and signal conductors to the traffic signal side of the cabinet. The small cable vault shall route conduit and communication cables to the communication side of the cabinet. The pull box and small cable vault shall be labeled accordingly and there shall be no conduit connection between the pull box and the small cable vault.

2.17.3.5 Wiring

The Design-Builder shall follow the requirements of the WSDOT *Design Manual* and the following:

- WSDOT *Northwest Region Current Practices in Electrical Design* (Appendix T)

2.17.3.6 Signal Heads

The Design-Builder shall use the following standards for signal heads:

- 12-inch signal lenses for all vehicle displays
- 16- by 18-inch lenses for all pedestrian displays
- Type M mounting for all vehicle heads mounted on mast arms. Other signal mounting shall conform to the Standard Plans
- A minimum of one overhead display for each approach lane. Dedicated right turn lanes may have the display mounted on the signal pole shaft in place of an overhead display.
- A minimum of 8 feet separation between all signal displays for a given approach
- LED signal heads shall be installed for all vehicle and pedestrian signal indications
- Pedestrian signal heads shall include a countdown timing feature
- All arrow displays for left or right turn signals shall be used for protected-only operations
- Flashing yellow arrow displays shall be used for permissive turning movements with dedicated lanes.

2.17.3.7 Signal Standards

The Design-Builder shall use the following standards for permanent signal standards:

- Signal standards with vehicle displays shall be Type I, Type II, or Type III standards. Type II and III signal standards may be single mast arm or dual mast arm. Dual mast arm signal standards shall only have mast arms oriented at 90 degrees from each other.
- Type PS pedestrian signal standards shall follow the guidelines of the WSDOT Design Manual when selecting fixed or slip bases.
- Type PPB posts shall be installed with a breakaway feature.
- Type II and Type III signal standards shall have a terminal cabinet with two 12-position terminal blocks.
- Signal standards that are not selected from the pre-approved list in the Special Provisions require a shop drawing and design calculation submittal in accordance with Standard Specification 9-29.6. All Type III

signal standards shall only use Type 1 luminaire arms. All signal standards shall be from the same manufacturer.

- Type II and Type III signal standards and foundations shall be designed to support additional future wind load in accordance with the requirements of the WSDOT *Design Manual*.
- A metal tag shall be permanently affixed to the top of foundation for each Type II, Type III, and special design signal standard indicating the foundation depth and diameter in accordance with Standard Plan J-26.15.
- Finish coat for all WSDOT signal standards shall be painted or powder coated cascade green in accordance with these technical requirements and the *I-405 Urban Design Criteria* (Appendix L).

All Accessible Pedestrian Signal (APS) push buttons shall be in accordance with the Standard Plans, Special Provisions, and Snohomish County Traffic Signal Special Provisions.

Where pre-approved signal standards are not used, signal standards shall be designed in accordance with the requirements of the WSDOT *Standard Specifications* and Section 2.13, *Bridges and Structures*.

2.17.3.8 Vehicle Detection

Stop line vehicle detection shall be installed for all lanes including right turn and left turn lanes.

Placement of advance loops for traffic signals operated by WSDOT shall be in accordance with the WSDOT *Design Manual* and the WSDOT *Northwest Region Current Practices in Electrical Design* (Appendix T).

Vehicle detection for City of Bothell signals shall include video detection for stop bar detection and loops for other detection in accordance with Snohomish County Traffic Signal Special Provisions.

2.17.3.9 Traffic Signal Controller and Controller Cabinet Equipment

The Design-Builder shall design and construct traffic signal controller and controller cabinets in accordance with these Technical Requirements and the Mandatory Standards.

Traffic signal control equipment shall meet the following requirements:

- Eagle Type 2070 L controller shall be used.
- Software for the 2070 L controller shall be Intelight MaxTime Version 1.9.9.
- The controller shall communicate centrally over the IP network and locally at a baud rate greater than 38,400.

Controller cabinet equipment for City of Bothell signals shall be in accordance with Snohomish County Traffic Signal Special Provisions.

1 **2.17.4 Construction Requirements**

2 **2.17.4.1 General**

3 The Design-BUILDER shall construct all components of a traffic signal system
4 necessary to provide a complete and functional system that meets the
5 requirements specified in this Section.

6 The Design-BUILDER shall perform all Quality Assurance and Quality Control
7 testing for temporary and permanent signal systems in accordance with the
8 Request for Proposal Special Provisions and Mandatory Standards. The
9 Design-BUILDER shall incorporate the time required for traffic signal testing and
10 turn-on, as described in this Section, into the Baseline Contract Schedule and
11 Monthly Contract Schedule Updates for submittal to WSDOT. The
12 Design-BUILDER shall submit all testing procedures, pass/fail requirements, and
13 equipment documentation to WSDOT for Review and Comment and resolve all
14 WSDOT comments a minimum of 14 Calendar Days prior to any testing. The
15 Design-BUILDER shall submit test reports to WSDOT upon completion of each test
16 in accordance with this Section and Section 2.28, *Quality Management Plan*.
17 WSDOT may observe any tests and will audit test results. The Design-BUILDER
18 shall notify WSDOT when all signal requirements have been met in accordance
19 with the Contract, including training, documentation, testing, and field
20 installations.

21 The WSDOT Engineer will perform the final electrical inspection and acceptance
22 of traffic signal systems in accordance with WAC 296 46B, Electrical Safety
23 Standards, Administration, and Installation.

24 The Design-BUILDER shall coordinate with the Utility Owner to determine the
25 required separation between overhead Utilities and signal structures. The
26 minimum separation between signal structures and equipment and overhead
27 power lines, including the neutral, shall be 10 feet.

28 Signal cabinets and UPS cabinets installed with other cabinets shall be oriented so
29 that the police panel and generator transfer switch are fully-accessible. The
30 Design-BUILDER shall construct a 3-foot level clearance around the cabinets to
31 facilitate maintenance.

32 Signal cabinets shall be installed with the front doors opening away from the
33 intersection so that an engineer facing the front of the cabinet will also be facing
34 the intersection.

35 All existing traffic systems, including the detection and preemption systems, shall
36 remain in place and operational at all times. If any portion of the existing signal
37 system will be removed or disabled, the Design-BUILDER shall provide and install
38 temporary replacements for any removed or disabled equipment.

39 For temporary traffic signal installations, the Design-BUILDER shall install
40 temporary detection for stop bar loop locations and advance loop locations prior
41 to disconnection of existing detection. Down time or fixed timing operation (no

detection available) is not allowed without prior approval from the WSDOT Engineer and the WSDOT Signal Operations Engineer.

2.17.4.2 WSDOT Electrical Inspector

The Washington State Department of Labor and Industries has authority over all electrical installations within the State. WSDOT has been granted authority over all electrical installations within the Right of Way of State highways, provided WSDOT maintains and enforces an equal, higher, or better standard of construction, materials, devices, appliances, and equipment than is required by Applicable Laws. It is the role of the WSDOT Electrical Inspector to ensure that all electrical installations, including Illumination, Traffic Signal, and ITS installations, meet the requirements of the National Electric Code, and Applicable Laws and provisions.

The WSDOT Electrical Inspector will perform the following:

- Act as a resource for the electrical design team
- Assist with electrical system plan reviews (as applicable)
- Perform periodic electrical inspections during construction
- Witness required field tests (as desired)
- Perform inspections required before energizing any new equipment or circuits
- Inspect and approve all electrical installations in accordance with this Contract.

2.17.4.3 Operation and Maintenance

Upon Notice to Proceed, the Design-BUILDER shall be responsible for maintaining all traffic signal system equipment outside of the controller cabinet, up to and including the landing of field wiring in the controller cabinet, for all traffic signal systems identified for modification or removal. The Design-BUILDER shall retain this maintenance responsibility until Physical Completion of the Project. WSDOT Region Traffic Signal Maintenance Staff or responsible Local Agency will retain maintenance responsibility for the equipment inside the traffic signal controller cabinet.

As part of maintenance responsibility, the Design-BUILDER shall be responsible for performing locates for all traffic signal systems included in the Work. WSDOT or responsible Local Agency will perform the first set of locates requested by the Design-BUILDER for existing systems – refresh requests are the responsibility of the Design-BUILDER.

The Design-BUILDER shall be responsible for repairing, to the WSDOT Engineer's satisfaction and at no cost to WSDOT, any damage caused by the Design-BUILDER to traffic signal systems. The Design-BUILDER shall take all necessary action to ensure safe operation of the intersection. If the Design-BUILDER's Work impacts the operations of an existing traffic signal, the Design-BUILDER shall immediately rectify the impact and resume operation of the impacted signal. Liquidated

damages will be assessed for unplanned signal system disruptions lasting more than 24 hours. Refer to Section 1-08.9 of the *General Provisions*.

The Design-Builder shall remove all temporary signal system installations, if any, after the new permanent signal systems are completed and operational.

The Design-Builder is not authorized to program or operate any traffic signal system controller. Only WSDOT staff may program or operate a traffic signal controller, including placing a system into or out of flashing operations using the police panel. WSDOT staff authorized by the Region Signal Maintenance Manager or responsible Local Agency, which may include WSDOT Engineer assistants and inspectors, may access the police panel and place a system into or out of flashing operations in coordination with the Design-Builder's Traffic Control Supervisor in support of traffic control operations.

2.17.4.3.1 *Emergency Maintenance*

The Design-Builder shall notify the Traffic Systems Management Center and the WSDOT Engineer in the event that a situation related to public safety is observed, such as a dark or flashing signal intersection, improper signal timing, misaligned signal heads, exposed wires, or knockdowns.

For systems included in the project, the Design-Builder shall perform all required emergency repairs on equipment outside of the traffic signal controller cabinet, up to and including the landing of field wiring in the controller cabinet. Repairs or temporary replacements shall be installed and operational within 8 hours of initial notification of a fault.

WSDOT Region Traffic Signal Maintenance Staff will respond for repairs to equipment inside the traffic signal controller cabinet.

2.17.4.4 *Permits*

When a Traffic Signal Permit is required, the Design-Builder shall prepare and submit the traffic signal permit application in accordance with Chapter 1330 of the WSDOT *Design Manual*. The Design-Builder shall also provide supplemental information as described in Section 6.3 of the WSDOT *Traffic Manual*. No traffic signal construction may occur without an approved Traffic Signal permit. Modifications to existing WSDOT maintained traffic signals will require a traffic signal permit for a report of change.

2.17.4.5 *Testing and Turn-On*

The Design-Builder shall satisfy the requirements of Section 8-20.3(11)A of the Standard Specifications and document completion in accordance with the WSDOT *Signal Turn-On Requirements*. The Design-Builder shall submit the Signal Turn-On Checklist to the WSDOT Engineer for Review and Comment 5 Calendar Days prior to scheduling a turn-on date for that traffic signal system. Turn-On shall be in accordance with Section 8-20.3(11)B of the Standard Specifications.

2.17.4.6 Material Requirements

The Design-Builder shall furnish and install all materials required for revisions to the existing traffic signal systems.

No traffic signal materials will be provided by WSDOT for the Project.

Materials shall meet the requirements specified in Section 9-29 of the Standard Specifications, and as supplemented and amended by this Section and the Special Provisions.

2.17.4.7 Salvage

The Design-Builder shall salvage existing traffic signal equipment removed by the Design-Builder as described in this Section.

The following traffic signal equipment shall be salvaged and delivered to the agency designated:

- Traffic signal standards including mast arms and luminaire arms
- Controller cabinets and equipment contained therein
- Video detection equipment including mounts
- Pedestrian signals and push buttons

Salvaged equipment shall be delivered to the applicable address below:

City of Bothell
Snohomish County Cathcart Way Operations Center
8915 Cathcart Way
Snohomish, Washington 98296
Telephone (425) 388-7500

Fourteen Calendar Days prior to delivery of salvaged items, the Design-Builder shall provide a list of salvaged items, their quantity, and their current condition to the WSDOT Region Signal Maintenance Superintendent or applicable agency contact. The Design-Builder shall give a minimum of 7 Calendar Days notice to the WSDOT Region Signal Maintenance Superintendent or applicable agency contact prior to delivery of salvaged equipment. The Design-Builder shall provide all labor and equipment to transport, load, and unload the salvaged equipment.

2.17.4.8 Temporary Signals and Temporary Modifications

Temporary Signalization shall conform at minimum to the following channelization requirements:

- Three through lanes shall be provided on SR 522 between the northbound I-405 to westbound SR 522 intersection and the southbound I-405 to eastbound SR 522 intersection during all construction stages, except during allowable closures as noted in Maintenance of Traffic (MOT) Allowable Closures (Appendix T). The through lanes should start at least 300 feet on either side of the temporary signals and the

transition from three to two lanes must contain at least 300 feet of lane followed by proper merge transition taper.

- Left and right turn pocket storage shall be equal to or longer than as shown in the minimum configuration during construction as indicated in the I-405, Brickyard to SR 527 Improvement project - Intersections Operations Memorandum (Appendix T).
- City of Bothell temporary traffic signals shall not reduce any existing lane configuration unless allowed by the City.
- See Section 2.22, *Maintenance of Traffic*, for additional requirements.

Temporary signal system(s) and temporary modifications to existing signal systems shall be designed and installed when required in accordance with this Section and Section 2.22, *Maintenance of Traffic*, and Section 2.21, *Traffic Operations*. Temporary signal systems shall be modified, adjusted, or relocated as necessary to accommodate the Released for Construction (RFC) Traffic Control Plans, Staging Plans, order of Work, and detours. After the permanent signal system is energized and made operational, or restored to original configuration and operation, the temporary signal system and/or temporary modifications shall be completely removed. All temporary system poles, wiring, junction boxes, conduit sweeps, and cabinets shall be removed. Holes and voids shall be backfilled.

Temporary signal systems and temporary modifications to existing signal systems shall meet all requirements for permanent traffic signal systems. Timber poles may be used in place of steel signal pole standards for temporary traffic signal installations.

Fiber optic interconnect communications systems shall be maintained for all temporary traffic signals.

2.17.5 Submittals

All deliverables shall be in accordance with the requirements of Sections 2.12, *Project Documentation*, and 2.28, *Quality Management Plan*.

The Design-Builder shall also submit the following back-up data items with the Preliminary Design Submittal:

- Speed study data indicating 90th, 85th, and 10th percentile speeds for all approaches
- Peak hour turning movement counts (a.m., midday, and p.m.)
- Detection zone placement calculations in accordance with the WSDOT *Design Manual* Phasing analysis to support protected or protected-permitted left-turn phasing. If protected-permitted left-turn phasing is planned, provide verification that conditions are suitable for this type of operation.

- A1 height calculations for proposed and future phasing to verify minimum/maximum allowed roadway clearances. Attach cross sections for review.
- In the case of temporary span wire installations, calculations and cross sections are required to verify that roadway clearances will be within the allowable range.

The Design-BUILDER shall also submit the following back-up data items with the Final Design Submittal:

- Wind load calculations for signal mast arms for proposed and future phasing conditions to support foundation sizing. Attach soils analysis for each signal standard to verify foundation design. Attach back-up design data for all special designs. In the case of temporary span wire installations, strain pole class and foundation selection calculations are required to support the design.
- Electrical load calculations in accordance with Section 2.16, *Illumination*, unless these calculations are already included in submittals for Section 2.16, *Illumination*.
- Utility Agreement and Utility Relocation Requests
- Conduit fill and junction box capacity calculations

The Design-BUILDER shall submit a Signal Turn-On Checklist to the WSDOT Engineer for Review and Comment 5 Calendar Days prior to placing any new or modified traffic signal into operation.

2.17.5.1 Working Drawings

Working Drawings and product data shall include the following:

- Shop drawings for all poles, mast arms (by type and size), and pedestals
- Service cabinets
- Luminaires and lamps
- Ballasts and photoelectric controls
- Paint (prime and finish)
- Fuse holder kits, fuses, and insulating boots
- Loop detector splice kits
- Vehicle signal indications and lenses
- Pedestrian signal indications, lenses, and housings
- Emergency vehicle preemption equipment
- Video detection equipment

2.17.5.2 Preliminary Signal Plan

The Preliminary Signal Plans shall be prepared in accordance with the Mandatory Standards. The Plans shall include, at a minimum, the following items:

- Plan showing location of signal standards; controller cabinets; detection zones, loops, or both; detector locations; conduit; and junction boxes required for the installation
- Signal sequence/phasing diagram
- Identification of existing signal items to remain
- Title block, north arrow, and scale bar
- Legend of symbols
- Existing signal features and Utilities
- Proposed channelization
- Illumination
- Signals to be interconnected
- Cabinet locations and orientations

The Design-Builder shall submit the Preliminary Signal Plans to the WSDOT Engineer for Review and Comment as part of the Preliminary Design Submittal.

2.17.5.3 Final Signal Plan

Permanent Signal Plans shall be complete and include, at a minimum, all of the items from the Preliminary Signal Plan Submittal and the following:

- Conduit and conductor schedule showing new wire and existing wire to remain
- Field wiring diagram and cabinet wiring termination diagram for each signal system
- Complete construction notes
- All wire, cable, and terminations that are needed for the complete operation of the signal system
- Pole schedule specifying mounting height, attachment offsets, attachment angles, and foundation depths
- Cabinet input file detail sheet
- All references to Standard Plans and electrical details
- Structural calculations
- All signal details in accordance with, at a minimum, the WSDOT *Northwest Region Illumination and Signal Details*
- Pull box, cable vault, and junction box locations and details
- Interconnect Plans and details including cabinet electronics, wiring, and equipment installation
- Loop termination schedule
- Cabinet and pole foundation details
- Details for non-standard elements

- Radar or IR Video detection system (including detector(s), mounting hardware, cabling, and installation details)
- Wire notes (including identification of new and existing conductors, cable, and conduit)
- List/quantity of items to be salvaged
- Documentation regarding the power source and coordination with the local power company
- Design Documentation (such as clearance measures, loop test sheets, voltage drops, and conduit fill calculations)

2.17.5.4 Released for Construction Documents

The Design-Builder shall include the following items with the Released for Construction Documents:

- All elements required for the final signal design
- All resolved comments from the final signal design
- Additional design elements addressed

2.17.5.5 Miscellaneous Submittals

This Section intentionally omitted.

End of Section
